Areas relevant and any exclusions	Ysbyty Gwynedd Main Theatres Exclusions: Ysbyty Gwynedd Obstetric Theatre.

1 Aims of the LocSSIP and key factors for consideration:

To layout the process for the peri-operative provision of blood products for patients in Theatres & Recovery. It does not cover the safe transfusion of blood products.

2 NatSSIPs addressed within this procedural LocSSIP:

All nursing, ODP & medical staff should be fully aware of the local blood product ordering process for patients undergoing surgery.

3 Responsibilities

3.1 Theatre Manager

- To ensure that Theatre staff (agency & substantive) have obtained appropriate competencies in blood transfusion management (See Appendix).
- To ensure that all theatre staff follow this LocSSIPP.

3.2 Theatre Team Leader

- To facilitate Theatre staff in obtaining appropriate competencies in blood transfusion management (See Appendix).
- At Team Brief, ensure that blood issues are discussed & patients requiring a 'Group & Screen' +/- blood products are identified.

3.3 Theatre Staff

- To maintain appropriate competencies (See Appendix)
- To follow triple verification closed loop communication process when tasked with ordering blood products.

4 Ordering Process

4.1 At Team Brief:

- Identify which patients will require a Group & Screen & those requiring specific blood products.
- Confirm on Blood Track Enquiry that units are available for issue.

4.2 At Theatre Check-In:

- Confirm that a Blood Track collection form is required. If blood is available on Blood track, then proceed with the following using Closed-Loop communication:
- Ask Reception 'I wish to have a Blood Track collection form printed out.'
- State:
    - Theatre
    - Triple Verification: Name, Hospital Number & Date of Birth.
    - Blood product(s) required.
- Receptionist will fill in a card with the information provided.
- Ask receptionist to then read out the card to confirm details are correct.
  N.B. the blood product type stated on the form is important, but the number stated does not matter at this stage as is can be changed by hand, if a different number of units is required at the time of collection.
- If at the time of Check-In, the Group & Save request is still pending, then inform the theatre team & surgeons & request a print out, once availability of blood is confirmed on Blood Track.
- If reception is not available (eg out of hours), then request collection forms via the Recovery nursing team, ensuring that the same triple verification, closed loop communication is followed.

4.3 In Theatre:

- Keep the Blood collection form readily available ie. with the anaesthetic chart.

4.4 In Recovery:

- Unused collection form(s) should be given to the recovery nurse during handover.
- Upon leaving recovery, the form(s) are placed in the confidential waste and not to be filed in the notes.

<u>4.5 When Packed Red Cells (pRBCs)are required:</u>

- When Blood Track collection Form available:
    - Call the theatre porter to theatre.
    - The requesting Doctor writes the number of units on the pick-up form & hands the form to a theatre porter.
    - If more than two pRBC units are required, then ask the porter to place 2 units per cool box.
- When Blood Track collection form not available:
    - Follow the process described in **section 4.2**.
- The porter will obtain the pRBCs from the Omnicell.
- ODPs are <u>only</u> tasked with retrieving blood products, when no theatre porter

is available.
- In the event of a massive blood loss, activate the Major Haemorrhage Protocol (ex.2222) stating location & call Blood Bank on 5880 (Bleep 043 out of hours) to request the units required.

4.6 When other Blood Products are required:
- Call Blood Bank on 4368 (Bleep 043 out of hours), unless in an emergency (ex.5880).
- Use Blood Track Enquiry to check availability of products for collection.
- Print out Blood Track Enquiry pick up form by selecting the appropriate product on the drop down menu.

5 Returning Unused Blood Products

5.1 pRBCs & Fresh Frozen Plasma (FFP) must be used within 4 hours of removal from a cool box.

5.2 pRBCs

- pRBCs can be returned to the Omicell within 30 minutes of removal from the cool box.
- pRBCs contained within an unopened cool box, can be returned within 4 hours.

5.3 FFP

- Can be kept for 24 hours if contained within an unopened cool box. Contact blood bank for advice.

5.3 Platelets

- Discuss with blood bank.

6 Incident documentation and audit processes

6.1 Any patient safety incidents recorded using the Datix system will be investigated as appropriate.
6.2 Monthly Datix data is displayed on the information board in Main Theatres.
6.3 Regular LocSSIP audits are performed to ensure compliance of standards.
6.4 Relevant Incidents discussed in the Quality and Safety monthly meetings.
6.5 Lessons learnt for incident reviews cascaded though the department as required.

Instructions for logging on to Learn Blood Transfusion E-learning

Please complete the e-learning and print out your certificate. Keep the original in your portfolio.

This excellent E-learning package written by NHS Scotland is approved for use by the NHS across the UK. **www.learnbloodtransfusion.org.uk**

1. On the left side of the screen click there is a blue tab "Click here to register with learn pro NHS". Click on this
2. Read and agree to Terms &Conditions
3. Enter personal details (this site is secure and approved by NHS Wales) For the user name use your email address. For unique ID use your nadex number
4. The next page asks you to select your location. Please select
   - Select NHS Wales
   - Betsi Cadwaladr University Health Board
   - Select base hospital, Glan Clwyd / Wrexham Maelor / Ysbyty Gwynedd
5. The next tab asks you to select your Job role. Please select
   - Doctor (grade), Nurse, Midwife, Health Care Support Worker etc
6. Select next-You are now registered
7. Log on and select the learn tab at the top
8. Click on the Learn Blood Transfusion tab (under categories)
9. Add the Courses: For example:
   LBT: Safe Transfusion Practice – this includes sampling procedure, Administration Procedure and management of the transfused patient (mandatory for all)
   LBT: Blood components and Indications for use (may be required in your role)
   LBT: Acute transfusion reactions (may be required in your role)
   LBT: Consent for Transfusion (may be required in your role)
10. Once you have added the relevant courses please complete the modules selected Evidence of all completed courses / modules -once finished -can be found by clicking the certificate tab at the top of the page. Certificates can then be printed and kept by the individual as proof of competency (required every 2 years).
