Outside Room Checklist - HDU

Plan:

- Call ward staff to bring patient to HDU
- Decide on team members going into cubicle: anaesthetist + ODP (blp 243) - full PPE
  - 1 nurse in full PPE just outside the closed doors.
- Team members staying outside the cubicle – not in PPE:
  - Runner & scribe (nurse/HCA)
- Discuss escalation plan including plan for CPR / failed intubation.

Equipment check:

- Intubation tray from ITU/HDU. **Check contents.**
- Drug tray from ITU (containing Roc, Metaraminol, Propofol, and infusion line).
- **Request Induction agent / controlled drugs** from CD cupboard. NB *See Ketamine dosing table below.*
- From the airway ancillary trolley on HDU:
  - **1 facemask of appropriate size.**
  - **1 C-MAC blade – either 3, 4 or D-blade.**
  - **Bougie (or C-MAC stylet if using D-blade – taped to the side of the cupboard)**
  - **If difficult airway predicted – 1 SGA (2nd Gen LMA) of appropriate size.**
  - **iv access kit (if patient does not already have 2 iv access)**
  - **CVP and art line kit (in room)**

PPE

- Empty pockets first. E.g. phones, bleeps, pens, badges.
- Put on PPE following guidance on wall
- FFP3 mask, Gown, Long purple gloves, Blue outer gloves, visor.
- Buddy check PPE before entering
- On entering: Set up all equipment then commence in room checklist.

Weight (kg)	**Ketamine 1-2mg/kg 10mg/ml (BLUE vial)**	**Rocuronium 1.2mg/kg 10mg/ml**
50	5-10ml	6ml
60	6-12ml	8ml
70	7-14ml	9ml
80	8-16ml	10ml
90	9-18ml	11ml
100	10-20ml	12ml
110	11-20ml	14ml
≥120	Up to 20ml	15ml
