Organisation of Obstetric Theatre for COVID patient (TS DRAFT V3)

1. Minimum appropriate staff to be nominated.
2. Anaesthetist to declare GA or Regional. This will instruct all staff to be in respectively PPE FFP3 or FFP2 (Fluid Resistant Surgical mask).
3. Refer to "COVID PPE for Labour Ward and Obstetric Theatre Document"
4. Supply of FFP3 masks will be in the locked cabinet of the Auxiliary theatre. Their use will need to be recorded.
5. Move Paediatric Trolley & Resuscitaire™ from Auxiliary theatre to Obstetric Theatre Recovery Room.
6. Refer to Schematic Diagram over page – not to scale!
7. "Clean" runner to be in the Surgical Equipment Area.
8. Surgical equipment area to be separated from main theatre by clean trolley.
9. Anaesthetic clean trolley will have just enough equipment for GA and spinal and be sited against wall behind anaesthetic area.
10. Anaesthetic equipment trolley to be behind this wall (between the scrub area and the surgical equipment store.
11. Clean runner can pass surgical equipment and anaesthetic equipment onto their clean trolley as requested.
12. Any extra surgical equipment that may be required should be prepared and easily available to the clean runner e.g. for major obstetric haemorrhage.
13. The patient should not be transferred to theatre until theatre and theatre staff are prepared.
14. Patient is transferred to obstetric theatre as per "Transfer to Obstetric Theatre for COVID Patients" Guideline.
15. If GA patient can be prepared and draped and then all staff except anaesthetist and ODP will retire to Theatre Recovery. When patient is intubated, they will return to theatre by the Auxiliary theatre route.
