MANAGEMENT OF COMPLICATIONS

Suspected Anaphylaxis Follow-up

Author(s): Dr T Bialowiski
Reviewer: Departmental Guideline Group

YG CG 202 FEB 18

REVIEW BY: JUNE 2027

Key Points

- It is the duty of the Anaesthetist who primarily managed the event to complete the appropriate paperwork.
- It is the duty of Dr Tomek to refer to the Allergy clinic and communicate the results of investigations to the patient, GP and Anaesthetist.

Follow-Up Process

1. Following resuscitation, obtain a blood sample for:

- Mast Cell Tryptase 1,6 and 24 hours post event. (5ml biochemistry bottle)
- FBC, CRP, U&E, Coagulation
- IgE Level (5ml Biochemistry Bottle)

2. Anaesthetist involved in the management must make a note in the anaesthetic chart and write a brief description of the incident in the patient's notes.

3. Submit a Datix

4.. A short description of the adverse reaction must be placed on the front of the patient's notes. (it could take 3-6 months to determine the cause. During this period, the patient could be exposed to the trigger.)

5. Photocopy the Anaesthetic chart

6. Complete a Referral proforma for the University of Liverpool, Department of Anaesthesia and Immunology. (Located in the Anaesthetic Office)

7. Send Dr Tomek a hard copy of the proforma and anaesthetic chart.

You will be informed of the results of the investigations along with the GP and patient by Dr Tomek.
