OPERATIONAL

Group & Save Guideline for Surgery in LLGH

YG OPG 015

Author(s): S Clements, C Bailey, A Creegan
FIRST APPROVED: SEPT 23 **REVIEW BY:** SEPT 2026
Reviewer: Departmental Guideline Group, POAC, LLGH

Key Points

- **ALL** LLGH surgical patients who require a valid Group & Save must follow this guideline.

Introduction

The BCUHB Operative Procedures Blood Transfusion Requirements (OPBTR) policy identifies which operations require patients to be blood grouped and antibody screened (G&S). A number of these procedures are conducted in Llandudno Day Case Surgical Unit (LLGH).

ALL LLGH surgical patients who require a G&S must have one. This guideline outlines a process to ensure that this is achieved by the time of surgery.

N.B. Patients with a positive antibody screen are not eligible for surgery in LLGH.

In the unlikely event that blood products are required, follow the LLGH Massive Haemorrhage guideline.

Process

POAC
- Identify patients requiring G&S. (Refer to OPBTR Policy).
- 1st G&S sample drawn and sent.
- Check Antibody Screen to confirm eligibility for LLGH.
- 2nd G&S : Advise patient to attend local phlebotomy service 4 days prior to TCI date. Provide a completed Transfusion request form with verbal & written instructions to attend local phlebotomy service 4 days prior to TCI date.

4 Days before TCI
- Surgical Secretaries call patient to remind them to attend phlebotomy for 2nd G&S sample.
- Patient attends local phlebotomy service for drawing of 2nd G&S Sample.

2-3 Days Before TCI
- LLGH Maesdu ward staff check 2-3 days prior to TCI date that blood is available on Blood Track.
- If not, Maesdu ward staff inform the surgical secretary .

Day of Surgery
- At Team Brief, blood availability is confirmed on Blood Track.
